

Cloderm (clocortolone) basics

Treats skin irritation and skin rashes. Cloderm (clocortolone) is a medium strength topical medication that helps treat skin irritations and skin rashes, and comes in many easy-to-use formulations.

What to expect when starting

Here's when people typically experience benefits as well as some possible side effects. Your experience may be different.

[†] Data on frequency of side effects is not available.

Tips from pharmacists

- Clean and dry the affected area before applying Cloderm (clocortolone).
- Apply a thin layer on the affected area and rub in gently.
- Don't cover the affected area with bandages or dressings unless instructed by your doctor.
- Use only on your skin. Keep away from your eyes and mouth.
- Don't apply on cuts or scrapes.

Risks and warnings

Contact your doctor if you experience any of these.

Reduced hormone production

Using Cloderm (clocortolone) at high doses, for long periods of time, or in children, can cause the body to make less hormones that are important for many bodily functions. Use Cloderm (clocortolone) as directed, not for longer or more than what your doctor prescribed. Children may need regular growth checks. Speak to your doctor if your child must use this for long periods of time.

Infection

Cloderm (clocortolone) can raise your risk of getting skin infections, especially in the area where it is being applied. Use caution when applying to or around open wounds. Speak to your doctor about the signs and symptoms of a skin infection.

Pregnancy and breastfeeding

Cloderm (clocortolone) may be not the best option if you are pregnant or breastfeeding. Avoid use of Cloderm (clocortolone) for long periods or in large amounts if you are pregnant. If this concerns, speak to your doctor about other options.
